

More pixels or more speed? Why decide.

Great instruments don't create great science, but they are essential to telling the story. QImaging puts the right tool in your hands when the goal is fast, sensitive imaging and documentation in true plug-and-play fashion. With the QImaging Retiga R3, you get a 2.8 MP camera that provides large field of view for overview images, but capable of signal binning for work at high magnification or increased sensitivity. Fixed or live, time lapse, slide scanning or dynamic cell imaging, the R3 packs the punch you need in an everyday camera your lab will depend on.

The Retiga R3 is packed with advanced technical features that improve limits of detection and quantification. The camera generates large amounts of data, but handles it smoothly via the new super speed USB 3.0 interface.

Inside the R3 camera, QImaging introduces Intelligent Quantification™ - on camera intelligence features that correct for defective pixels. Fast 50 MHz pixel digitization increases camera frame rate to give you all the speed you need for almost any laboratory imaging challenge.

A great camera deserves great software for acquisition - it's the way you interface with your data. Ocular™ is the all new image acquisition platform, that's ready to become your go-to capture program. Built around controls you are already familiar with, it will be love at first click.

Scientific cameras are the cornerstone of the highest performing imaging instruments in a lab. Through careful selection of image sensors and components, the R3 will redefine your expectations, even for routine, applications. You will not find a more capable blend of speed and pixels anywhere else for this price... Call us to demo one today.
